

Tasks To Be Performed:

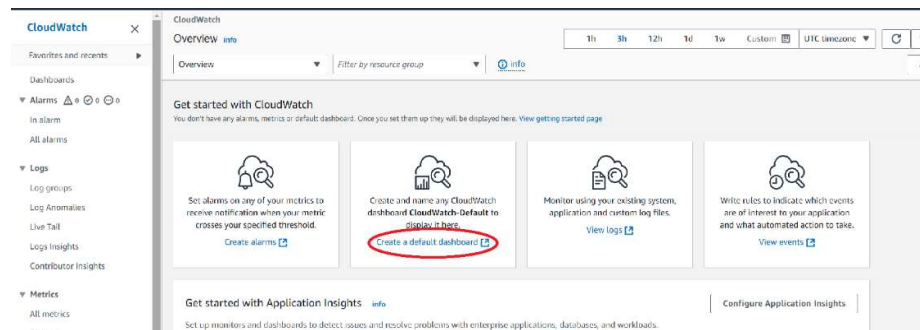

1. Create a dashboard which lets you check the CPU utilization and networking for a particular EC2 instance.

Solution:

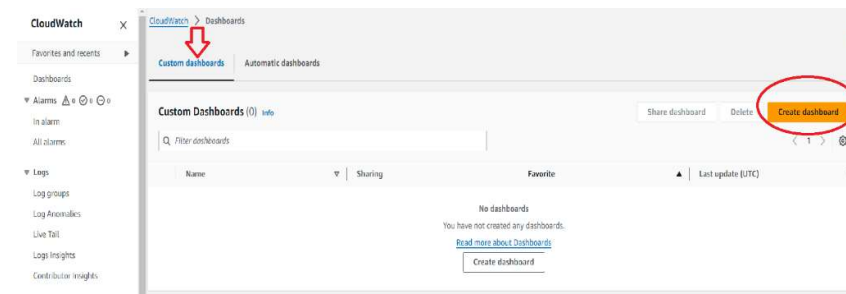

1) Create an instance.

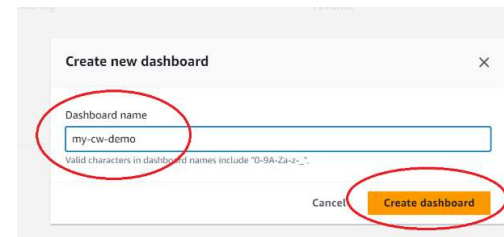

2) Go to Cloudwatch and click create a dashboard.

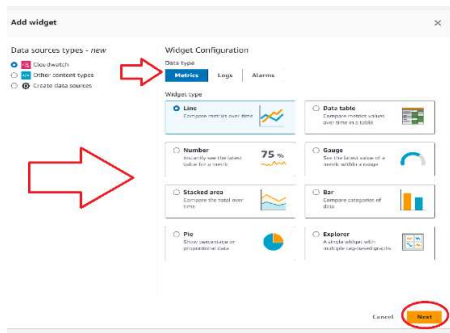

3) Go to custom dashboard and then create.

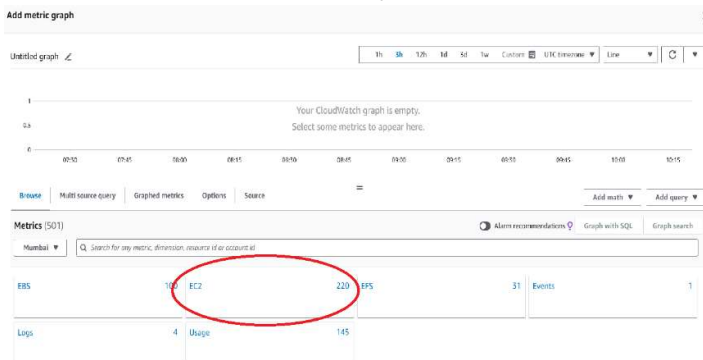

4) Give a name and create.

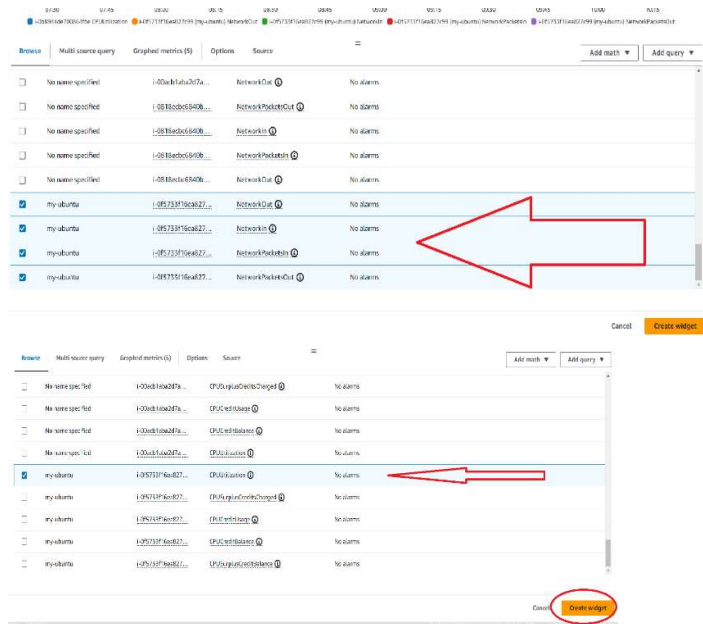

5) Choose the data type – metrics, logs or alarms. I have chosen metrics . choose the widget type. Click next.

6) Choose the metrics of the service you want to create dashboard. Click EC2.

7) There are all the metrics available and we so we can choose cpu utilization and network metrics and click create widget.

8) So my dashboard to check CPU utilization and networking for my instance is created. We can enlarge to view .
